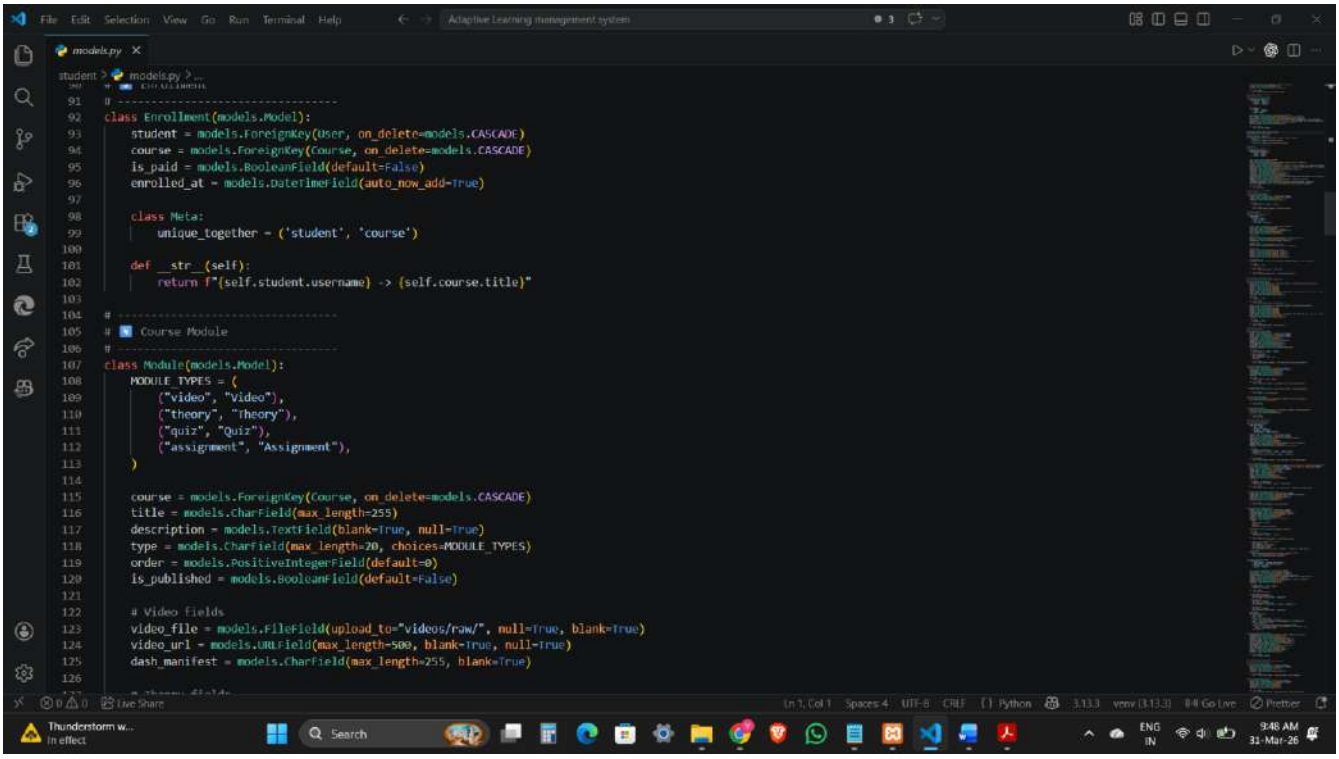
Student's Weekly Report of Internship

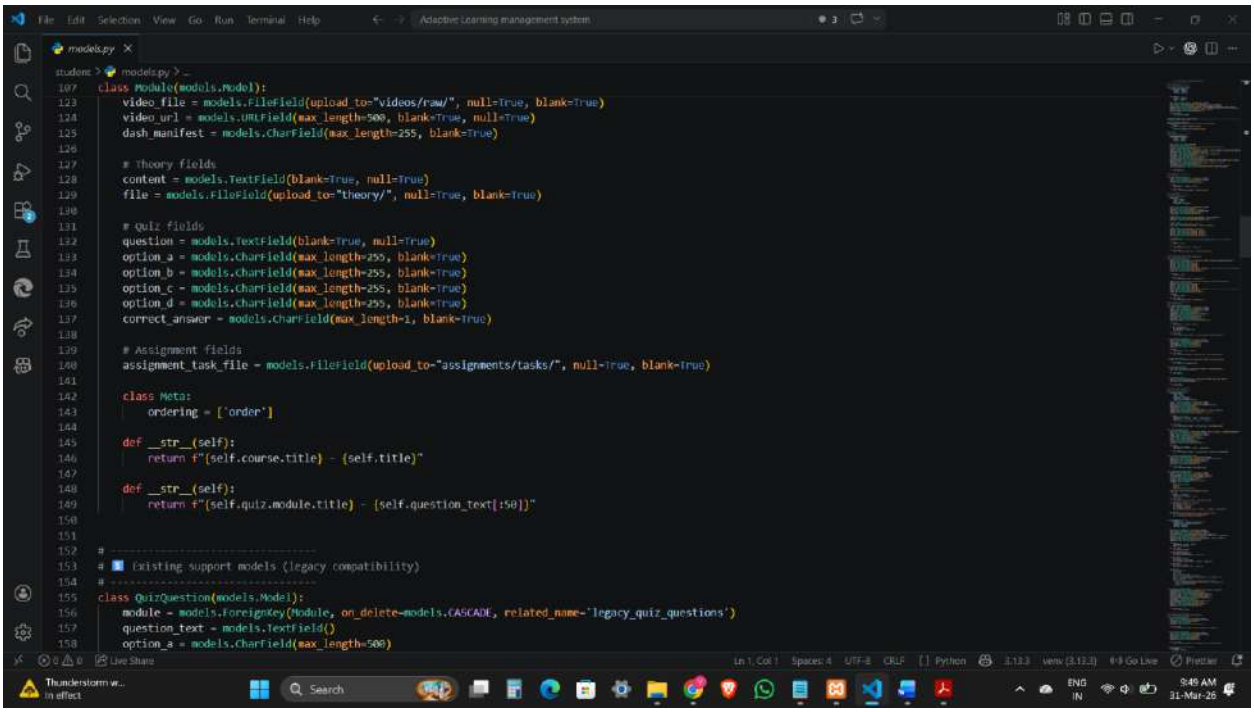
Student Name:	Vekariya Vraj Dipakbhai			
Enrollment Number:	221260116056			
Name Of Organization:	Bisag N			
External Guide Name:	Parth Sutariya			
External Guide Contact details:	**Email:**	Parthsutariya12@gmail.com	**Mob No:**	81558 51038
Internal Faculty Guide Name:	Prof. Amitkumar J. Patel			

Week 7 (16/02/2026 To 22/02/2026)

1. Implement course-module structure for student view (Video, Theory, Quiz flow)
2. Design student-related models (Enrollment, Progress tracking)
3. Develop basic student dashboard UI
4. Implement course enrollment functionality
5. Display course progress (percentage + module status)

Day 1 :- Implement course-module structure for student view (Video, Theory, Quiz flow)





```python
class Module(models.Model):
    video_file = models.FileField(upload_to="videos/raw/", null=True, blank=True)
    video_url = models.URLField(max_length=500, blank=True, null=True)
    dash_manifest = models.CharField(max_length=255, blank=True)

    # Theory fields
    content = models.TextField(blank=True, null=True)
    file = models.FileField(upload_to="theory/", null=True, blank=True)

    # Quiz fields
    question = models.TextField(blank=True, null=True)
    option_a = models.CharField(max_length=255, blank=True)
    option_b = models.CharField(max_length=255, blank=True)
    option_c = models.CharField(max_length=255, blank=True)
    option_d = models.CharField(max_length=255, blank=True)
    correct_answer = models.CharField(max_length=1, blank=True)

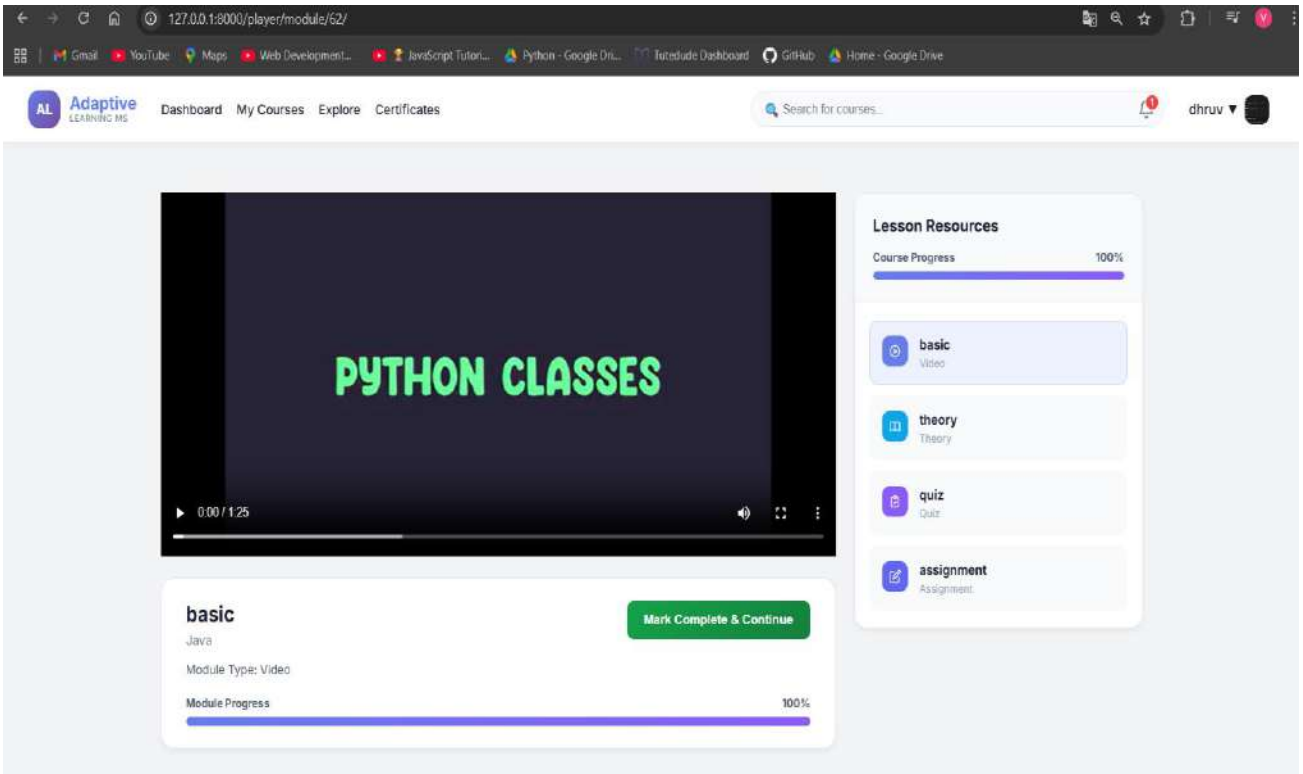
    # Assignment fields
    assignment_task_file = models.FileField(upload_to="assignments/tasks/", null=True, blank=True)

    class Meta:
        ordering = ['order']

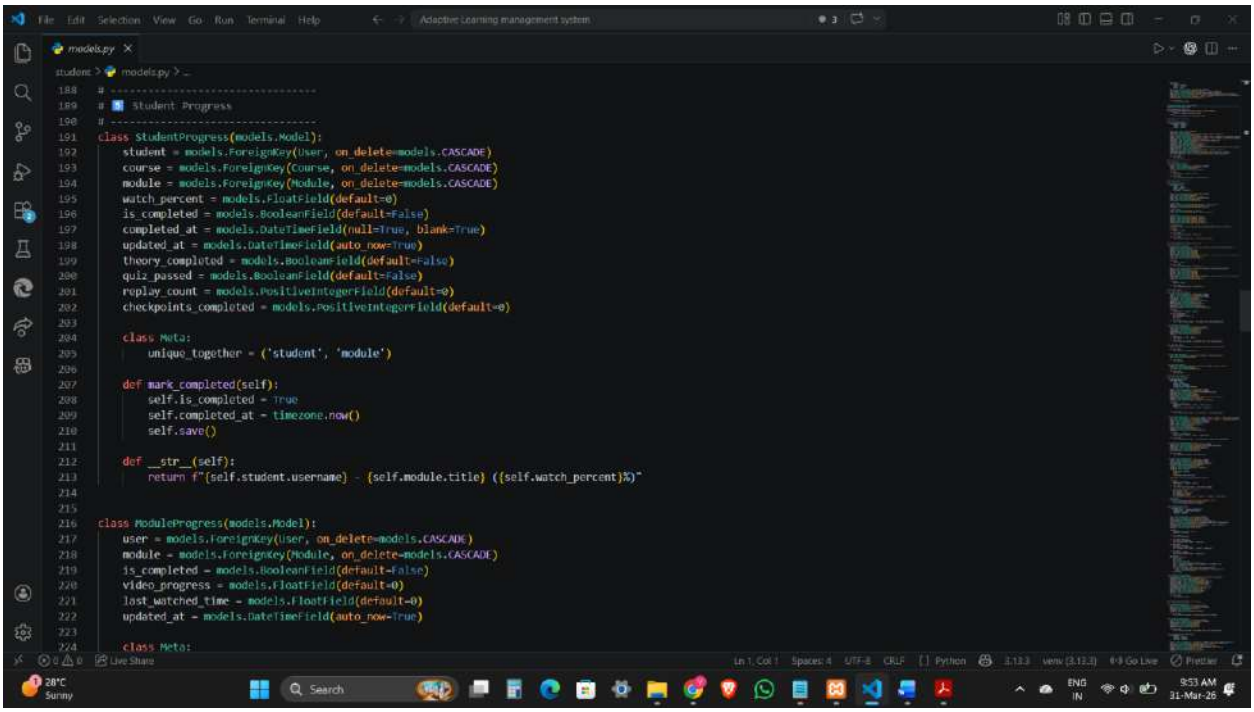
    def __str__(self):
        return f"{self.course.title} - {self.title}"

    def __str__(self):
        return f"{self.quiz.module.title} - {self.question_text[:50]}"

# ------------------------------
# 🔹 Existing support models (legacy compatibility)
# ------------------------------
class QuizQuestion(models.Model):
    module = models.ForeignKey(Module, on_delete=models.CASCADE, related_name='legacy_quiz_questions')
    question_text = models.TextField()
    option_a = models.CharField(max_length=500)
```



Day 2 :- Design student-related models (Enrollment, Progress tracking)



```python
# ---------------------------------
# 📊 Student Progress
# ---------------------------------
class StudentProgress(models.Model):
    student = models.ForeignKey(User, on_delete=models.CASCADE)
    course = models.ForeignKey(Course, on_delete=models.CASCADE)
    module = models.ForeignKey(Module, on_delete=models.CASCADE)
    watch_percent = models.FloatField(default=0)
    is_completed = models.BooleanField(default=False)
    completed_at = models.DateTimeField(null=True, blank=True)
    updated_at = models.DateTimeField(auto_now=True)
    theory_completed = models.BooleanField(default=False)
    quiz_passed = models.BooleanField(default=False)
    replay_count = models.PositiveIntegerField(default=0)
    checkpoints_completed = models.PositiveIntegerField(default=0)

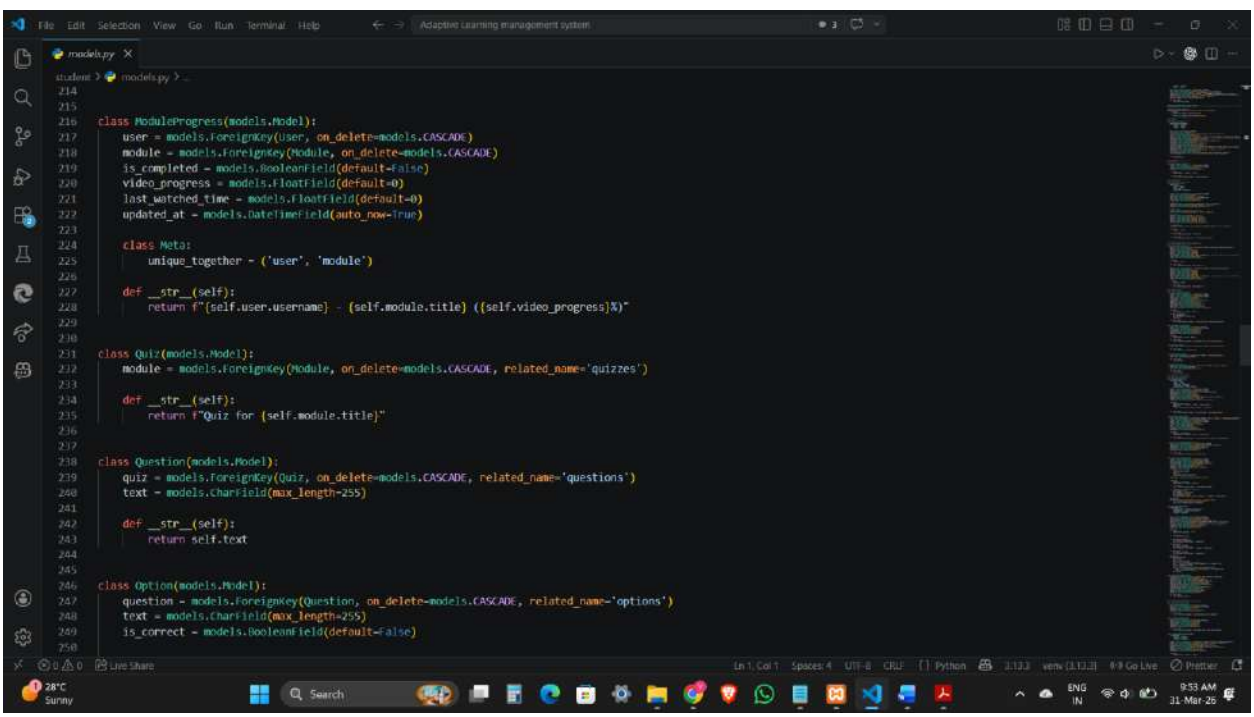
    class Meta:
        unique_together = ('student', 'module')

    def mark_completed(self):
        self.is_completed = True
        self.completed_at = timezone.now()
        self.save()

    def __str__(self):
        return f"{self.student.username} - {self.module.title} ({self.watch_percent}%)"

class ModuleProgress(models.Model):
    user = models.ForeignKey(User, on_delete=models.CASCADE)
    module = models.ForeignKey(Module, on_delete=models.CASCADE)
    is_completed = models.BooleanField(default=False)
    video_progress = models.FloatField(default=0)
    last_watched_time = models.FloatField(default=0)
    updated_at = models.DateTimeField(auto_now=True)

    class Meta:
```



```python

class ModuleProgress(models.Model):
    user = models.ForeignKey(User, on_delete=models.CASCADE)
    module = models.ForeignKey(Module, on_delete=models.CASCADE)
    is_completed = models.BooleanField(default=False)
    video_progress = models.FloatField(default=0)
    last_watched_time = models.FloatField(default=0)
    updated_at = models.DateTimeField(auto_now=True)

    class Meta:
        unique_together = ('user', 'module')

    def __str__(self):
        return f"{self.user.username} - {self.module.title} ({self.video_progress}%)"

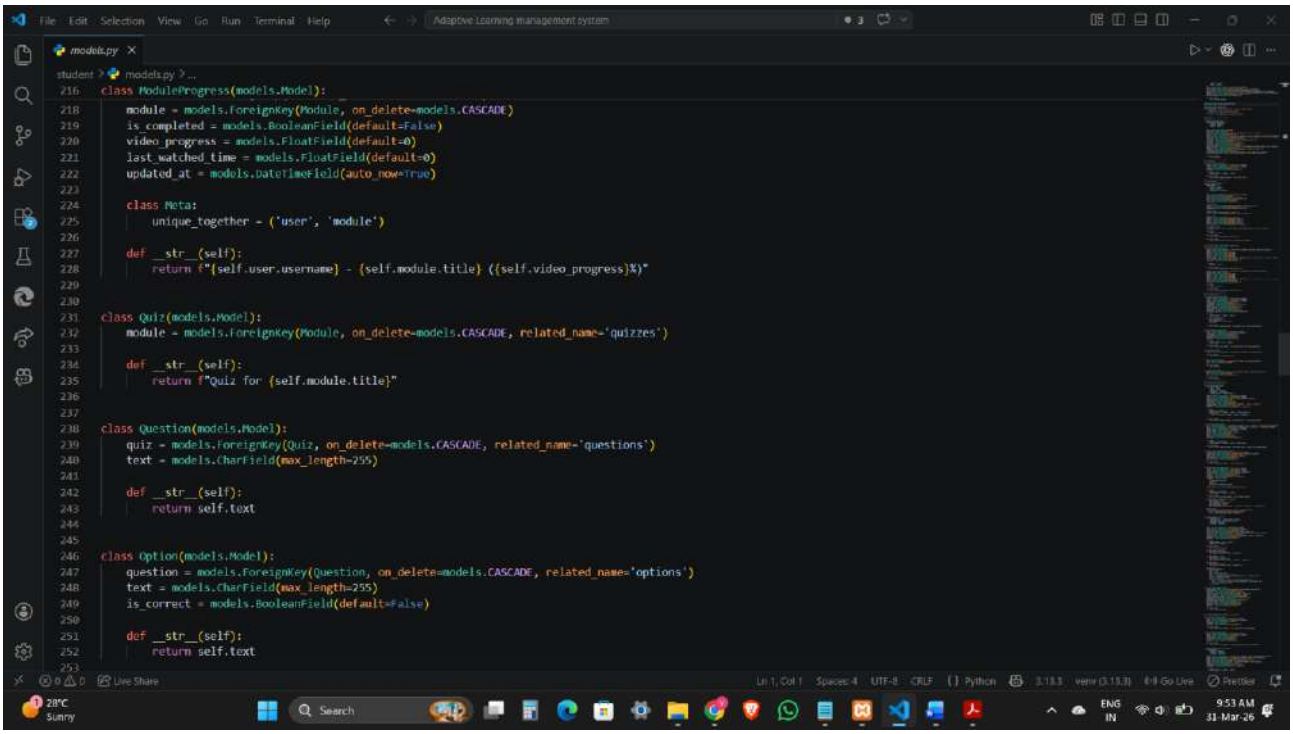
class Quiz(models.Model):
    module = models.ForeignKey(Module, on_delete=models.CASCADE, related_name='quizzes')

    def __str__(self):
        return f"Quiz for {self.module.title}"

class Question(models.Model):
    quiz = models.ForeignKey(Quiz, on_delete=models.CASCADE, related_name='questions')
    text = models.CharField(max_length=255)

    def __str__(self):
        return self.text

class Option(models.Model):
    question = models.ForeignKey(Question, on_delete=models.CASCADE, related_name='options')
    text = models.CharField(max_length=255)
    is_correct = models.BooleanField(default=False)
```



models.py
student > models.py > ...
class ModuleProgress(models.Model):
module = models.ForeignKey(Module, on_delete=models.CASCADE)
is_completed = models.BooleanField(default=False)
video_progress = models.FloatField(default=0)
last_watched_time = models.FloatField(default=0)

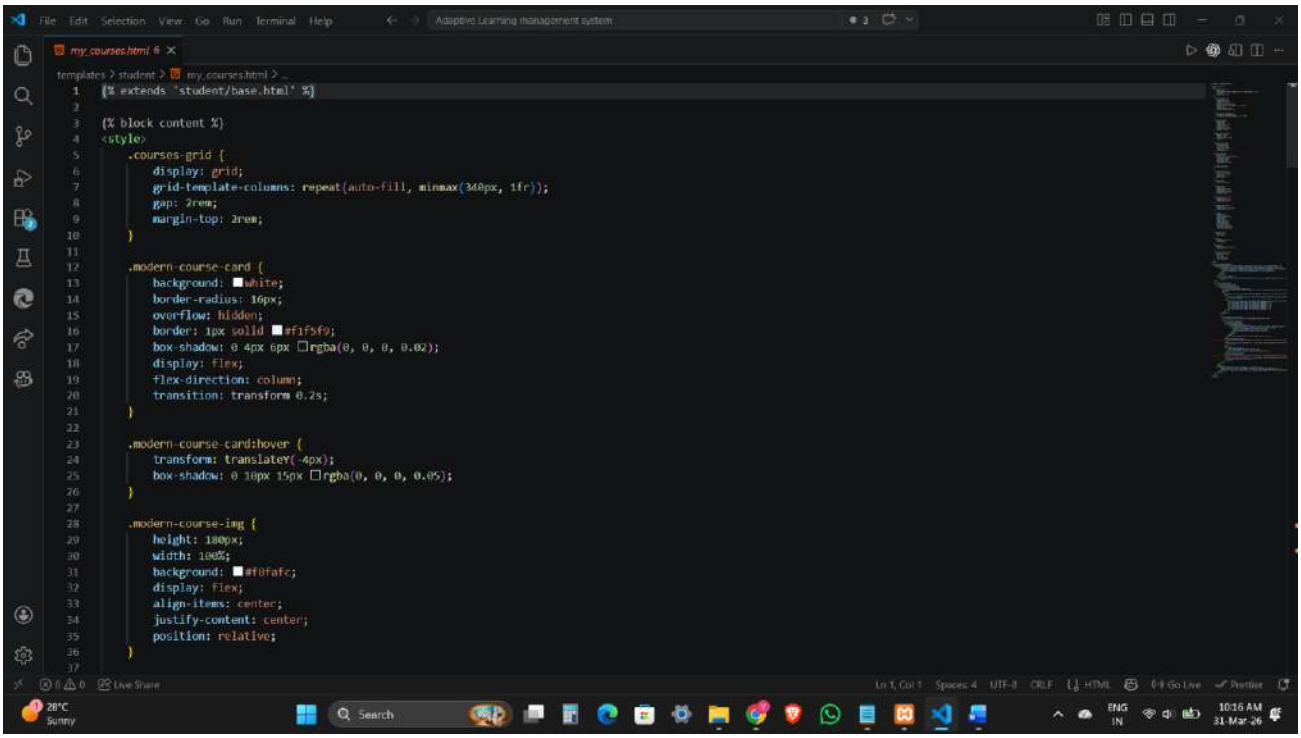
Week 8 (23/02/2026 – 01/03/2026)

1. Integrate video player in student panel
2. Implement forward-seek restriction (anti-skip learning control)
3. Add checkpoint validation during video playback
4. Store video watch history and progress in backend

Day 1 :- Integrate video player in student panel



```html
{% extends 'student/base.html' %}
{% load static %}

{% block extra_css %}
<style>
    .player-main-wrapper {
        margin: 1.5rem auto 0;
        max-width: 1280px;
        padding: 0 1.5rem;
    }

    .player-grid {
        display: grid;
        grid-template-columns: 2.8fr 1.2fr;
        gap: 1.5rem;
        align-items: start;
    }

    .viewport-column {
        display: flex;
        flex-direction: column;
        gap: 1.25rem;
    }

    .video-card,
    .course-info-card,
    .sidebar-card,
    #theorySection {
        background: #ffffff;
        border: 1px solid #e2e8f0;
        border-radius: 16px;
        box-shadow: 0 4px 6px rgba(15, 23, 42, 0.05);
    }

    .video-card {
        background: #000;
        overflow: hidden;
```

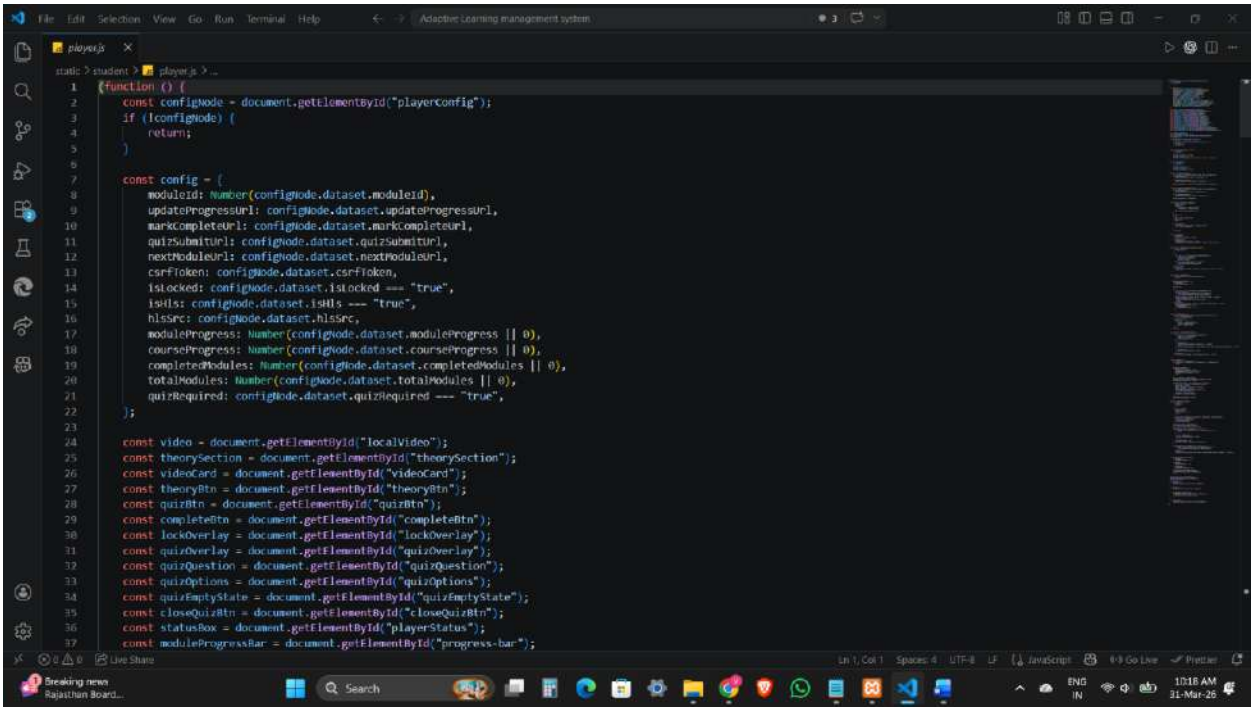
                    'X-CSRFToken': "{{ csrf_token }}"
```

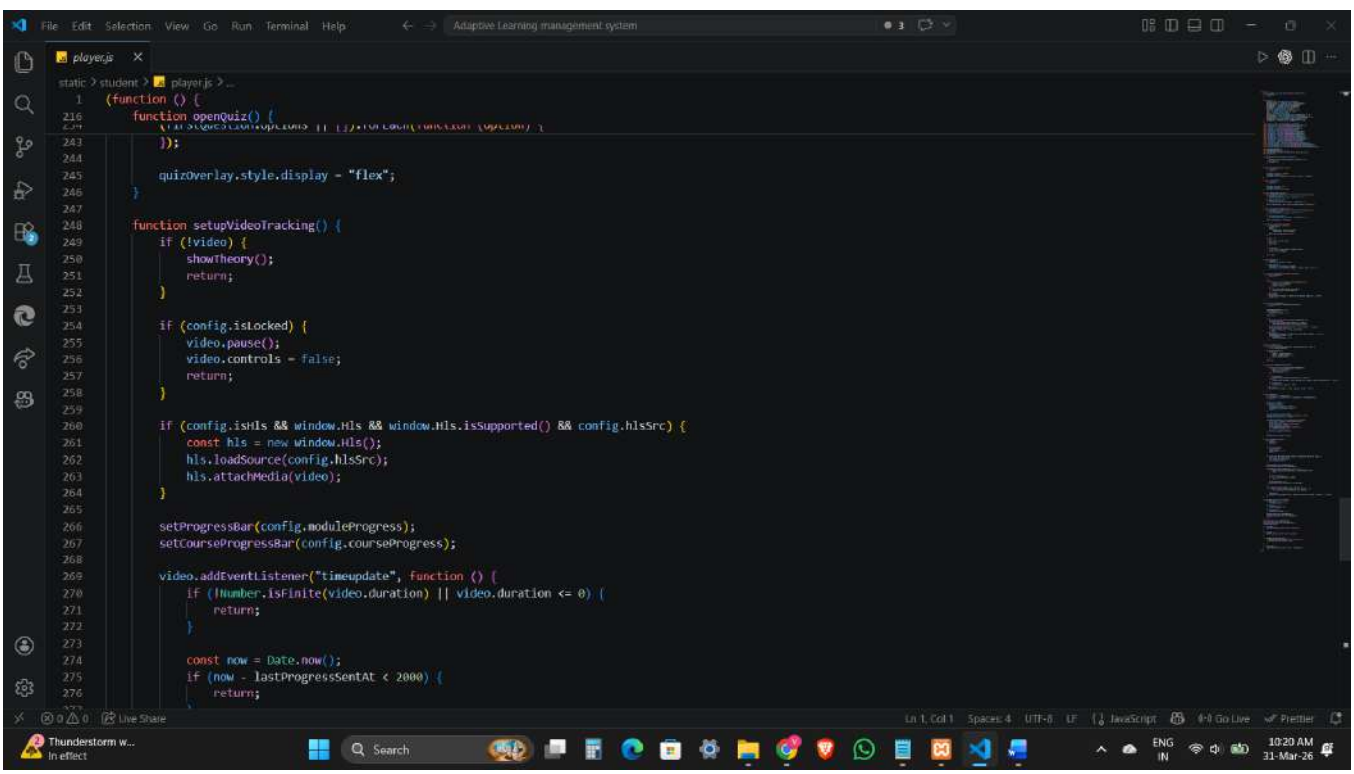


```javascript
(function () {
    const configNode = document.getElementById("playerConfig");
    if (!configNode) {
        return;
    }

    const config = {
        moduleId: Number(configNode.dataset.moduleId),
        updateProgressUrl: configNode.dataset.updateProgressUrl,
        markCompleteUrl: configNode.dataset.markCompleteUrl,
        quizSubmitUrl: configNode.dataset.quizSubmitUrl,
        nextModuleUrl: configNode.dataset.nextModuleUrl,
        csrfToken: configNode.dataset.csrfToken,
        isLocked: configNode.dataset.isLocked === "true",
        isHls: configNode.dataset.isHls === "true",
        hlsSrc: configNode.dataset.hlsSrc,
        moduleProgress: Number(configNode.dataset.moduleProgress || 0),
        courseProgress: Number(configNode.dataset.courseProgress || 0),
        completedModules: Number(configNode.dataset.completedModules || 0),
        totalModules: Number(configNode.dataset.totalModules || 0),
        quizRequired: configNode.dataset.quizRequired === "true",
    };

    const video = document.getElementById("localVideo");
    const theorySection = document.getElementById("theorySection");
    const videoCard = document.getElementById("videoCard");
    const theoryBtn = document.getElementById("theoryBtn");
    const quizBtn = document.getElementById("quizBtn");
    const completeBtn = document.getElementById("completeBtn");
    const lockOverlay = document.getElementById("lockOverlay");
    const quizOverlay = document.getElementById("quizOverlay");
    const quizQuestion = document.getElementById("quizQuestion");
    const quizOptions = document.getElementById("quizOptions");
    const quizEmptyState = document.getElementById("quizEmptyState");
    const closeQuizBtn = document.getElementById("closeQuizBtn");
    const statusBox = document.getElementById("playerStatus");
    const moduleProgressBar = document.getElementById("progress-bar");
```

Day 2 :- Implement forward-seek restriction (anti-skip learning control)



```javascript
(function () {
    function openQuiz() {
        });

        quizOverlay.style.display = "flex";
    }

    function setupVideoTracking() {
        if (!video) {
            showTheory();
            return;
        }

        if (config.isLocked) {
            video.pause();
            video.controls = false;
            return;
        }

        if (config.isHls && window.Hls && window.Hls.isSupported() && config.hlsSrc) {
            const hls = new window.Hls();
            hls.loadSource(config.hlsSrc);
            hls.attachMedia(video);
        }

        setProgressBar(config.moduleProgress);
        setCourseProgressBar(config.courseProgress);

        video.addEventListener("timeupdate", function () {
            if (!Number.isFinite(video.duration) || video.duration <= 0) {
                return;
            }

            const now = Date.now();
            if (now - lastProgressSentAt < 2000) {
                return;
```

Week 9 (02/03/2026 – 08/03/2026)

1. Implement quiz module interface (separate from video player)
2. Create backend API for quiz answer validation
3. Restrict module completion based on quiz performance
4. Store quiz attempts and results for progress tracking

Day 1 :- Implement quiz module interface (separate from video player)

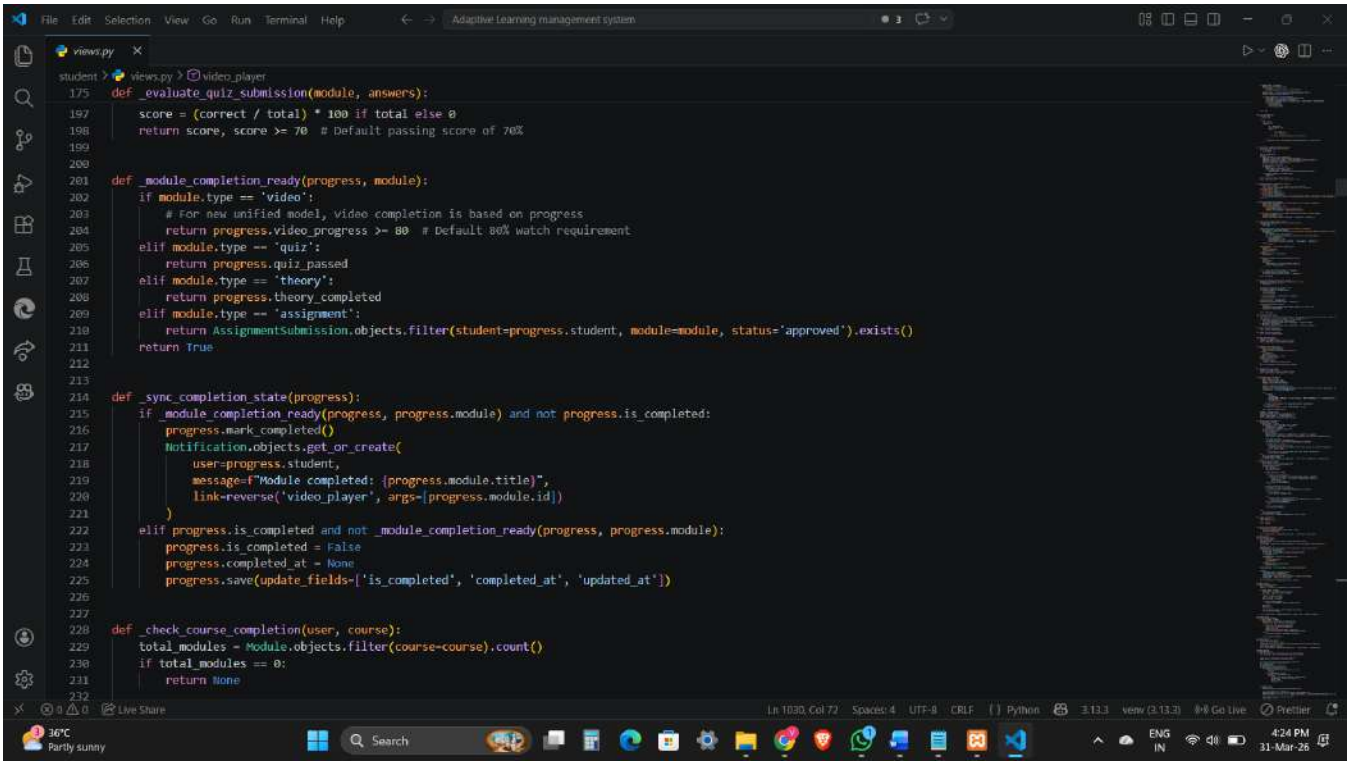
Week 10 (09/03/2026 – 15/03/2026)

1. Implement module completion rules (video watch % + quiz pass condition)
2. Restrict next module access until conditions are satisfied
3. Display course completion status on student dashboard
4. Create certificate request feature (student side)
5. Show certificate eligibility status to student

Day 1 :- Implement module completion rules (video watch % + quiz pass condition)

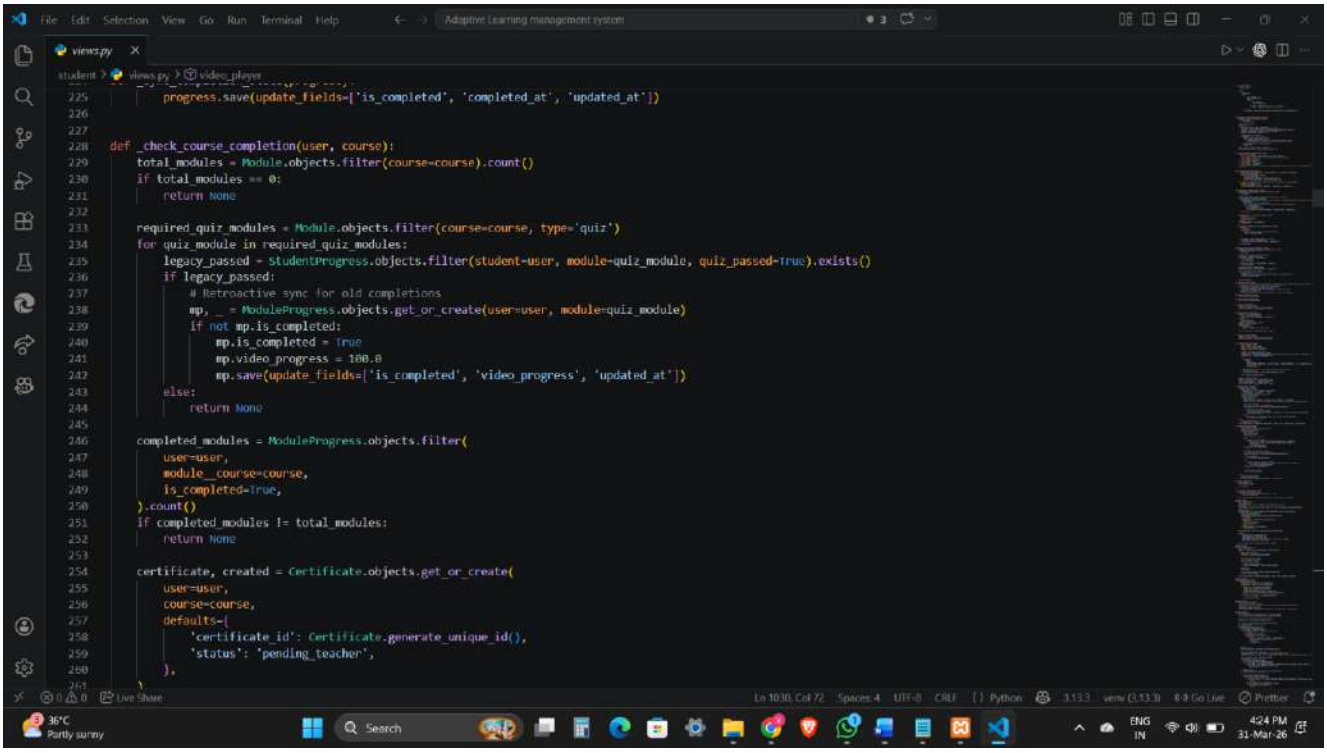


```python
def _evaluate_quiz_submission(module, answers):
    score = (correct / total) * 100 if total else 0
    return score, score >= 70  # Default passing score of 70%

def _module_completion_ready(progress, module):
    if module.type == 'video':
        # For new unified model, video completion is based on progress
        return progress.video_progress >= 80  # Default 80% watch requirement
    elif module.type == 'quiz':
        return progress.quiz_passed
    elif module.type == 'theory':
        return progress.theory_completed
    elif module.type == 'assignment':
        return AssignmentSubmission.objects.filter(student=progress.student, module=module, status='approved').exists()
    return True

def _sync_completion_state(progress):
    if _module_completion_ready(progress, progress.module) and not progress.is_completed:
        progress.mark_completed()
        Notification.objects.get_or_create(
            user=progress.student,
            message=f"Module completed: {progress.module.title}",
            link=reverse('video_player', args=[progress.module.id])
        )
    elif progress.is_completed and not _module_completion_ready(progress, progress.module):
        progress.is_completed = False
        progress.completed_at = None
        progress.save(update_fields=['is_completed', 'completed_at', 'updated_at'])

def _check_course_completion(user, course):
    total_modules = Module.objects.filter(course=course).count()
    if total_modules == 0:
        return None
```



```python
        progress.save(update_fields=['is_completed', 'completed_at', 'updated_at'])

def _check_course_completion(user, course):
    total_modules = Module.objects.filter(course=course).count()
    if total_modules == 0:
        return None

    required_quiz_modules = Module.objects.filter(course=course, type='quiz')
    for quiz_module in required_quiz_modules:
        legacy_passed = StudentProgress.objects.filter(student=user, module=quiz_module, quiz_passed=True).exists()
        if legacy_passed:
            # Retroactive sync for old completions
            mp, _ = ModuleProgress.objects.get_or_create(user=user, module=quiz_module)
            if not mp.is_completed:
                mp.is_completed = True
                mp.video_progress = 100.0
                mp.save(update_fields=['is_completed', 'video_progress', 'updated_at'])
        else:
            return None

    completed_modules = ModuleProgress.objects.filter(
        user=user,
        module__course=course,
        is_completed=True,
    ).count()
    if completed_modules != total_modules:
        return None

    certificate, created = Certificate.objects.get_or_create(
        user=user,
        course=course,
        defaults={

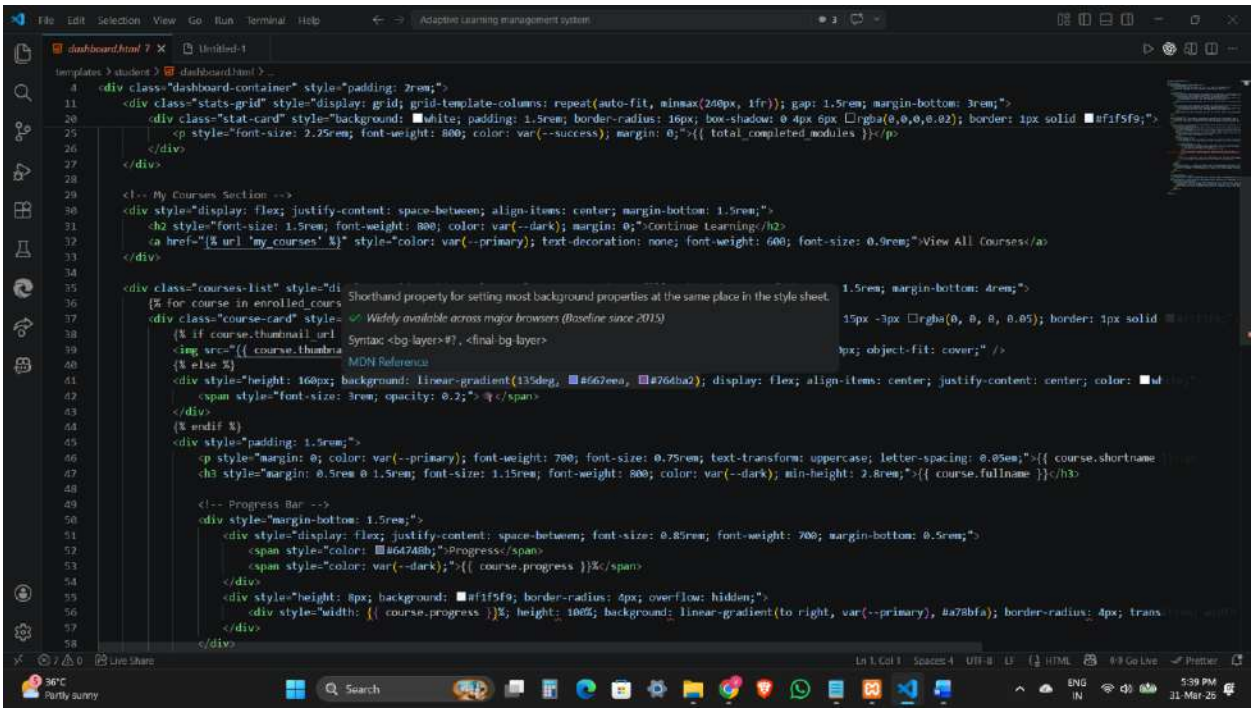
Week 12 (23/03/2026 – 29/03/2026)

1. Improve student dashboard UI (layout, buttons, usability enhancements)
2. Add notification system (course completion, quiz updates, assignment status)
3. Implement Assignment Module (Student Side):
   - View assignment PDF/task
   - Submit GitHub & Google Drive links
   - Display submission status (Pending / Approved / Rejected)
   - View feedback after teacher review
4. Perform end-to-end testing (enroll → video → quiz → assignment → certificate)

Day 1 :- Improve student dashboard UI (layout, buttons, usability enhancements)



```html
{% extends 'student/base.html' %}

{% block content %}
<style>
    .courses-grid {
        display: grid;
        grid-template-columns: repeat(auto-fill, minmax(340px, 1fr));
        gap: 2rem;
        margin-top: 2rem;
    }

    .modern-course-card {
        background: white;
        border-radius: 16px;
        overflow: hidden;
        border: 1px solid #f1f5f9;
        box-shadow: 0 4px 6px rgba(0, 0, 0, 0.02);
        display: flex;
        flex-direction: column;
        transition: transform 0.2s;
    }

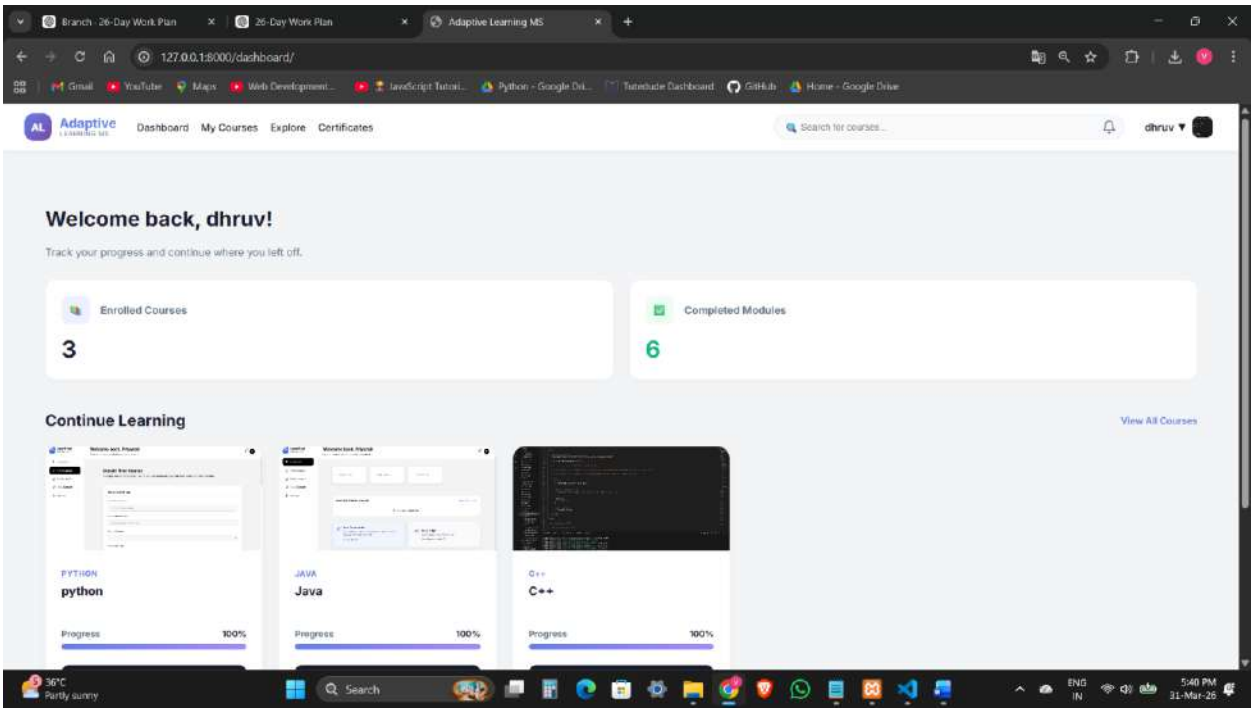
    .modern-course-card:hover {
        transform: translateY(-4px);
        box-shadow: 0 10px 15px rgba(0, 0, 0, 0.05);
    }

    .modern-course-img {
        height: 180px;
        width: 100%;
        background: #f8fafc;
        display: flex;
        align-items: center;
        justify-content: center;
        position: relative;
    }
```

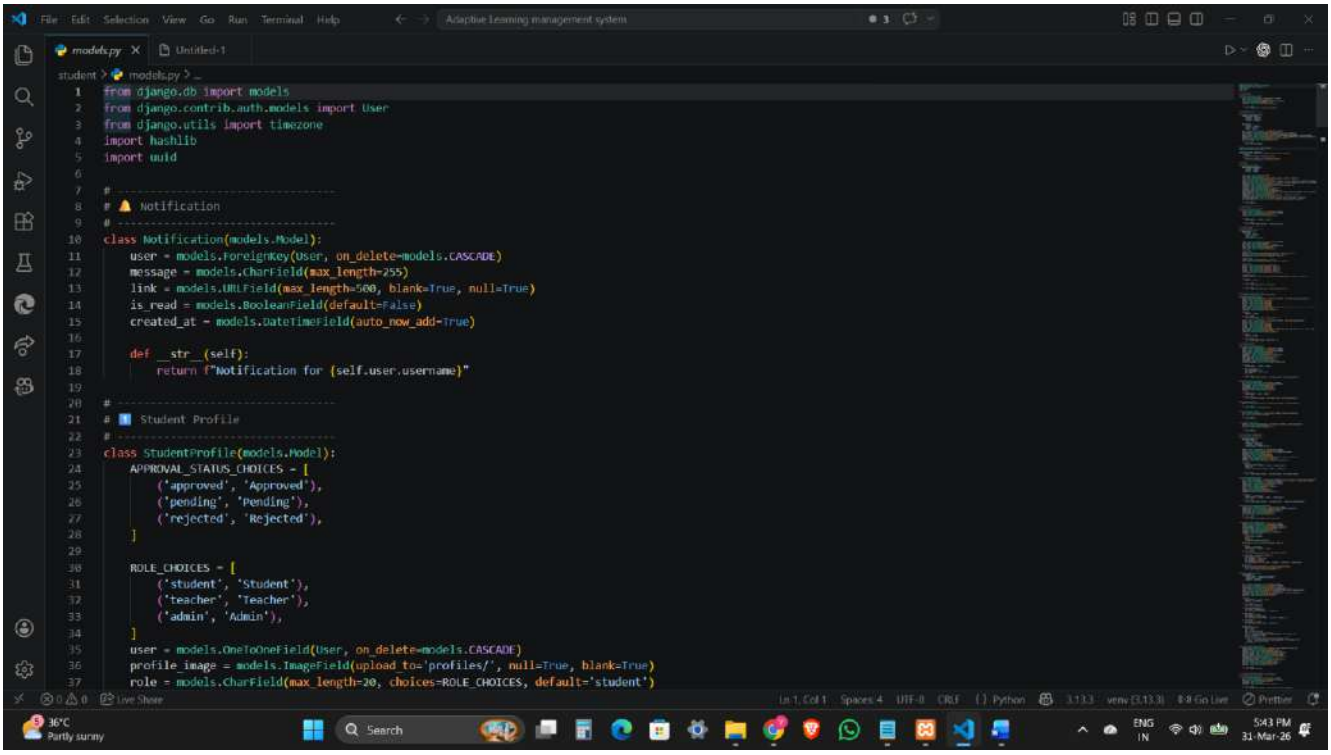
```html
<div class="explore-container">
    <div class="courses-grid">
        <div class="modern-course-card">
            <div class="modern-course-content">

                <div
                    style="display: flex; align-items: center; justify-content: space-between; margin-top: auto; border-top: 1px solid #f1f5f9; padding-top: 1.5rem;">
                    <div style="color: #94a3b8; font-size: 0.85rem; font-weight: 600;">
                        <span> {{ course.enrollment_set.count }} Students</span>
                    </div>

                    {% if course.id in enrolled_course_ids %}
                    <a href="{% url 'my_courses' %}" class="btn-action btn-green">
                        Enrolled
                    </a>
                    {% else %}
                    <a href="{% url 'enroll_course' course.id %}" class="btn-action btn-blue">
                        Enroll Now
                    </a>
                    {% endif %}
                </div>
            </div>
        </div>
        {% empty %}
        <div
            style="grid-column: 1 / -1; text-align: center; padding: 4rem; background: white; border-radius: 16px; border: 1px dashed #cbd5e1;">
            <p style="font-size: 1.1rem; color: #64748b; margin-top: 1rem;">No courses found matching your criteria.</p>
            <a href="{% url 'explore' %}" style="color: var(--primary); font-weight: 600; text-decoration: none;">View
                all courses</a>
        </div>
        {% endfor %}
    </div>
</div>
{% endblock %}
```



Day 2 :- Add notification system (course completion, quiz updates, assignment status)



```python
@login_required
@csrf_exempt
def video_replay(request):
    if request.method == 'POST':
        try:
            data = json.loads(request.body)
            module_id = data.get('module_id')

            module = get_object_or_404(Module, id=module_id, type='video')
            progress, _ = ModuleProgress.objects.get_or_create(
                user=request.user,
                module=module
            )

            # For replay tracking, we could add a field to ModuleProgress if needed
            # For now, just acknowledge
            return JsonResponse({'status': 'ok'})
        except Exception as e:
            return JsonResponse({'status': 'error', 'message': str(e)}, status=400)
    return JsonResponse({'status': 'error', 'message': 'Invalid method'}, status=405)

@student_required
def certificates_view(request):
    """View list of student's certificates and issue eligible ones."""
    enrollments = Enrollment.objects.filter(student=request.user)
    for enrollment in enrollments:
        _issue_certificate_if_eligible(request.user, enrollment.course)

    certificates = Certificate.objects.filter(user=request.user).select_related('course').order_by('-created_at')
    return render(request, 'student/certificates.html', {'certificates': certificates})

def verify_certificate(request, cert_id):
    """Public verification page for certificates."""
    certificate = get_object_or_404(Certificate, certificate_id=cert_id, status='approved')
    return render(request, 'student/verify_certificate.html', {
```

```python
def download_certificate(request, cert_id):

    return FileResponse(
        certificate.certificate_file.open('rb'),
        content_type='application/pdf',
        as_attachment=True,
        filename=f"Certificate-{certificate.certificate_id}.pdf"
    )

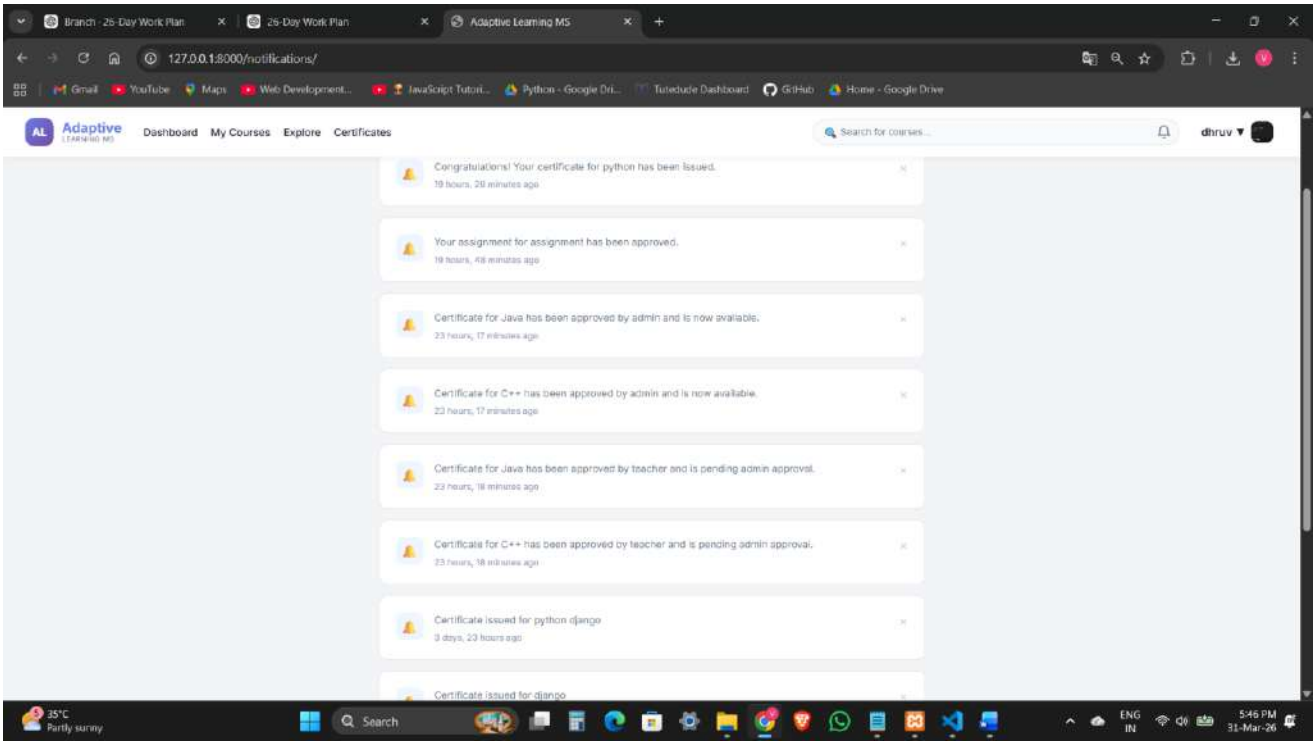
@login_required
@student_required
def notifications_view(request):
    if request.GET.get('action') == 'mark_read':
        Notification.objects.filter(user=request.user, is_read=False).update(is_read=True)
        return redirect('notifications')

    notifications = Notification.objects.filter(user=request.user).order_by('-created_at')

    # Optionally mark all as read automatically on visit
    # Notification.objects.filter(user=request.user, is_read=False).update(is_read=True)

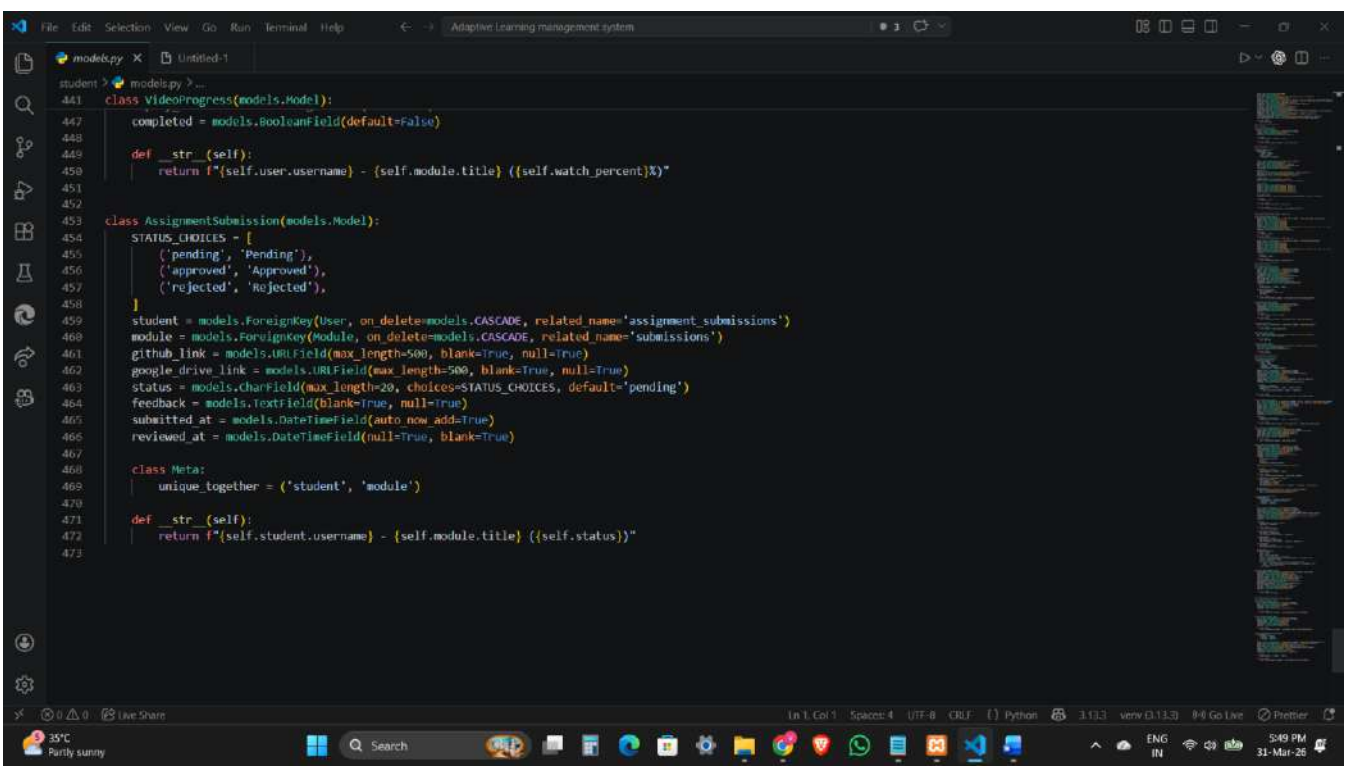
    return render(request, 'student/notifications.html', {'notifications': notifications})

@login_required
@student_required
def delete_notification(request, notification_id):
    notification = get_object_or_404(Notification, id=notification_id, user=request.user)
    notification.delete()
    return redirect('notifications')
```



Day 3 :- Implement Assignment Module (Student Side):

- View assignment PDF/task
- Submit GitHub & Google Drive links
- Display submission status (Pending / Approved / Rejected)
- View feedback after teacher review



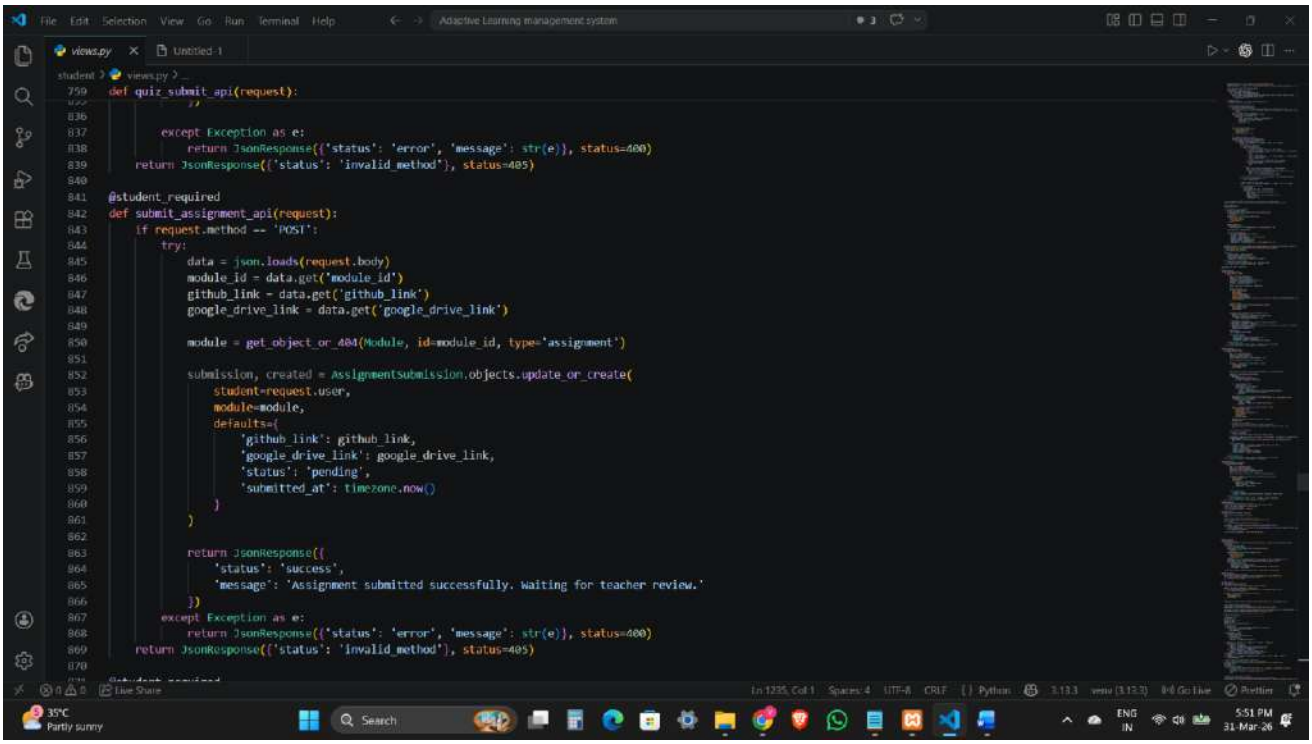
```python
class VideoProgress(models.Model):
    completed = models.BooleanField(default=False)

    def __str__(self):
        return f"{self.user.username} - {self.module.title} ({self.watch_percent}%)"

class AssignmentSubmission(models.Model):
    STATUS_CHOICES = [
        ('pending', 'Pending'),
        ('approved', 'Approved'),
        ('rejected', 'Rejected'),
    ]
    student = models.ForeignKey(User, on_delete=models.CASCADE, related_name='assignment_submissions')
    module = models.ForeignKey(Module, on_delete=models.CASCADE, related_name='submissions')
    github_link = models.URLField(max_length=500, blank=True, null=True)
    google_drive_link = models.URLField(max_length=500, blank=True, null=True)
    status = models.CharField(max_length=20, choices=STATUS_CHOICES, default='pending')
    feedback = models.TextField(blank=True, null=True)
    submitted_at = models.DateTimeField(auto_now_add=True)
    reviewed_at = models.DateTimeField(null=True, blank=True)

    class Meta:
        unique_together = ('student', 'module')

    def __str__(self):
        return f"{self.student.username} - {self.module.title} ({self.status})"
```



```python
def quiz_submit_api(request):
        )

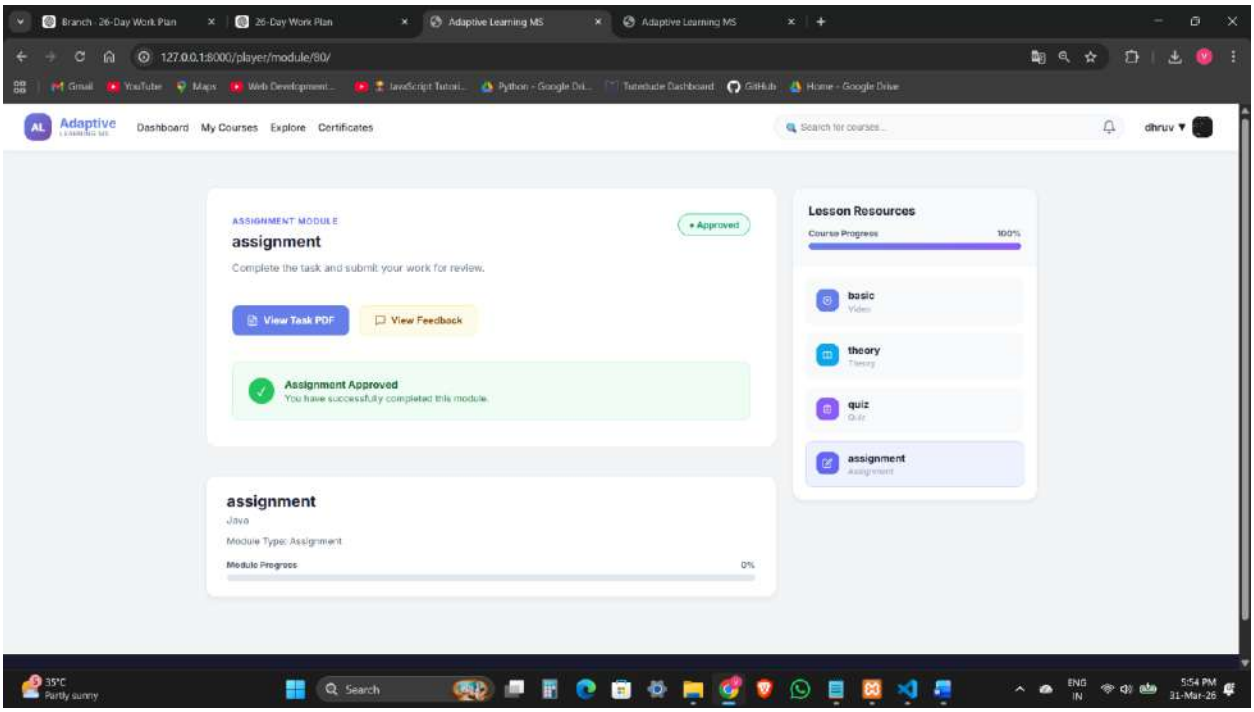
        except Exception as e:
            return JsonResponse({'status': 'error', 'message': str(e)}, status=400)
    return JsonResponse({'status': 'invalid_method'}, status=405)

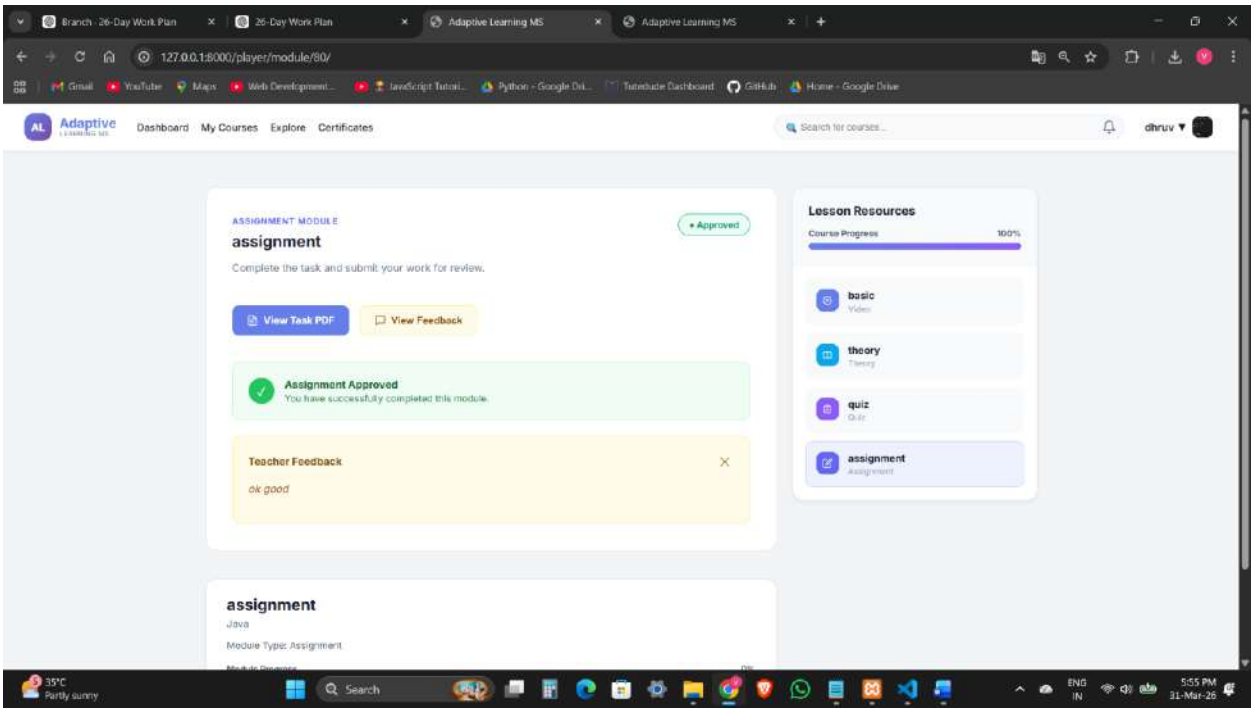
@student_required
def submit_assignment_api(request):
    if request.method == 'POST':
        try:
            data = json.loads(request.body)
            module_id = data.get('module_id')
            github_link = data.get('github_link')
            google_drive_link = data.get('google_drive_link')

            module = get_object_or_404(Module, id=module_id, type='assignment')

            submission, created = AssignmentSubmission.objects.update_or_create(
                student=request.user,
                module=module,
                defaults={
                    'github_link': github_link,
                    'google_drive_link': google_drive_link,
                    'status': 'pending',
                    'submitted_at': timezone.now()
                }
            )

            return JsonResponse({
                'status': 'success',
                'message': 'Assignment submitted successfully. Waiting for teacher review.'
            })
        except Exception as e:
            return JsonResponse({'status': 'error', 'message': str(e)}, status=400)
    return JsonResponse({'status': 'invalid_method'}, status=405)
```





Day 4 :- Perform end-to-end testing (enroll → video → quiz → assignment → certificate)

- Data Model
  - Add a submission model like:
- AssignmentSubmission
  - student_id
  - assignment_id
  - github_link
  - drive_link
  - status (Pending / Approved / Rejected)
  - feedback
  - submitted_at

- Frontend Flow (Student Panel)

  Inside course player:
  - Add new module type → Assignment
  - UI States:
    - Not Submitted → Show Submit Form
    - Submitted → Show "Pending Review"
    - Approved → Show "Completed ✅"
    - Rejected → Show feedback + resubmit option

- 3. Validation Rules

    - Prevent empty link submission
    - Ensure valid URL format
    - Allow resubmission only if rejected

- Integration with Completion Logic
    - Very important:
    - Assignment should be treated like:
        - module_completed = (status == "Approved")
    - Only then allow:
        - Next module unlock
        - Certificate eligibility
